

Burger Farm Mobile App

Zone-wise Product Brainstorming & Finalisation Framework (V2)

DOCUMENT PURPOSE

This document is the official product brainstorming and finalisation framework for the Burger Farm Mobile App.

The purpose of this framework is:

- To brainstorm zone-wise
 - To take inspiration from real-world apps
 - To discuss UX/UI, product logic, business impact, and scalability together
 - To document all assumptions separately from final conclusions
 - To ensure that ONLY ORANGE-TAGGED CONCLUSIONS are treated as FINAL DECISIONS
 - To maintain a scalable documentation system for future zones and future app versions
 - To provide a structured reference system for UI/UX teams, developers, founders, and stakeholders
-

GLOBAL APP PRINCIPLES

Product Philosophy

Hungry users are impatient users.

Every screen must:

- Reduce thinking
- Reduce clicks

- Increase cravings
- Increase confidence
- Increase order conversion speed

The app should feel:

- Fast
 - Emotional
 - Crave-worthy
 - Clean
 - Modern
 - Smart
 - Playful but premium
-

GLOBAL UX PRINCIPLES

Core UX Laws

1. One Primary CTA Per Screen

Never confuse the user.

2. Thumb-Friendly Design

Most ordering happens one-handed.

3. Minimal Typing

India-first UX.

Use:

- OTP
- Toggles
- Chips
- Selection cards
- One-tap actions

4. Motion Must Feel Functional

Animations should:

- Explain
- Reward
- Guide
- Confirm

Never animate for no reason.

5. Food Photography > Illustrations

Real food photography drives hunger and conversions.

GLOBAL LOADER SYSTEM

Loader Types

Loader Type A — Saving Data Loader

Used during:

- Login
- Signup
- Payment
- Final order placement
- Profile updates
- Reward redemption

Loader Type B — Fetching Data Loader

Used during:

- Menu fetch
 - Offers fetch
 - Store loading
 - Search loading
 - Cart refresh
 - Notifications fetch
-

FINAL CONCLUSION — GLOBAL LOADER SYSTEM

Saving Data Loader

The app will use a Burger Bag Loader animation inspired by:

- Jack in the Box loading style
- Starbucks emotional loading moments

Reference :

<https://drive.google.com/drive/folders/1LhmC1WKcXhjgErXdaEpnlwFFQBKitf7t?usp=sharing>

Animation behaviour:

- Burger bag appears at center
- Fries/burger ingredients move into bag
- Subtle steam/haze effect
- Full-screen loader only for critical actions
- Partial overlays for smaller saves

Fetching Data Loader

Fetching loaders will be contextual.

Different screens may use:

- Skeleton loaders
- Shimmer cards
- Category placeholders
- Menu card placeholders
- Store list skeletons

Spinners should be avoided wherever possible.

ZONE 1 — LAUNCH & ONBOARDING

Zone Objective

Create emotional onboarding with minimum friction.

Business Goal

- Maximize first-time conversion
 - Reduce signup drop-offs
 - Bring users to ordering within 12 seconds
 - Establish Burger Farm branding instantly
-

UX Goal

- Make onboarding feel exciting
 - Keep onboarding lightweight
 - Avoid overwhelming screens
 - Prioritize speed over information
-

User Psychology

New users decide within seconds whether the app feels:

- Trustworthy
- Modern
- Easy
- Fast
- Premium

The onboarding should feel:

- Energetic
 - Youthful
 - Food-first
 - Conversion-focused
-

Inspiration References

App	Inspiration Taken
McDonald's Japan	Moving food onboarding visuals
Starbucks	Store selection UX
Zomato	OTP simplicity
Swiggy	Fast onboarding flow
Burger King	Menu hierarchy

SCREEN FLOW — ZONE 1

Splash Screen

Onboarding Screen 1

Login / Signup

OTP Verification

Onboarding Screen 2

User Preferences

Home Screen

Store Selection On ordering screen starbucks type

SCREEN 1.1 — SPLASH SCREEN

Brainstorming

Questions Discussed

1. Should the splash be static or animated?
 2. Should it contain food visuals?
 3. How long should the animation run?
 4. Should product launches modify splash behaviour?
-

Inspirations

- Starbucks subtle animations
 - Modern gaming app logo reveals
 - McDonald's product motion transitions
-

Motion Concepts Discussed

- Logo bounce
 - Steam effect
 - Burger assembly animation
 - Product reveal transitions
 - Seasonal splash replacement
-

FINAL CONCLUSION — SPLASH SCREEN

- Splash screen will follow the approved demo task direction.
- Burger Farm logo animation will appear at center.
- Duration: 2 to 2.5 seconds maximum.
- Motion should feel premium and energetic.
- Product launch campaigns may temporarily override splash visuals.

- No CTA on splash screen.

SCREEN 1.2 — ONBOARDING SCREEN 1

Objective

Immediately establish food craving and brand tone.

Brainstorming

Questions Discussed

1. Should onboarding be informational or emotional?
 2. Should users skip onboarding?
 3. How much text is too much?
-

UI Concepts Discussed

- Full-screen burger visuals
 - Motion-based food entries
 - Floating ingredients
 - Minimal copywriting
-

FINAL CONCLUSION — ONBOARDING SCREEN 1

- Inspired by McDonald's Japan motion-style onboarding.
- Moving food elements will enter dynamically.

- Primary CTAs : With Google, With Apple , With Phone and OTP if Phone opted
- No Skip Button here
- Minimal text.
- Focus is craving generation, not information.

Reference :

https://drive.google.com/file/d/1IZDuiCzKm8lasIRiN2lh_luXNT7YDCnH/view?usp=sharing

SCREEN 1.3 — ONBOARDING SCREEN 2

Objective

Transition users toward ordering and login.

Brainstorming

Layout Explorations

- Top branding section
- Middle CTA-focused section : User preferences : Name , DOB , Phone (already filled if used phone login), Veg / Non Veg / Both, Accept T& C all happens on this screen
- Bottom vector illustrations

Information Considered

- Rewards
 - Fast ordering
 - Easy tracking
 - Store ordering
-

FINAL CONCLUSION — ONBOARDING SCREEN 2

Screen structure:

- Top: Burger Farm branding/logo
- Middle: Main onboarding CTAs
- Bottom: Vector-based supporting visuals

This screen becomes the last onboarding screen after this we transition to the home screen

These vectors will be moving and it will be background and the main screen CTAs for names and other data points in front

FINAL CONCLUSION — ZONE 1

- Login and onboarding are merged into a streamlined journey.
 - No third onboarding screen.
 - New users should ideally reach ordering capability within 12 seconds.
 - Address collection will NOT happen initially.
 - Store selection will use Starbucks-inspired UX.
 - Ordering mode selector remains globally accessible.
 - Final onboarding architecture prioritizes conversion speed over education.
-

ZONE 2 — LOCATION & STORE SELECTION

Zone Objective

Help users select the correct outlet quickly and confidently.

Business Goal

- Reduce ordering confusion
 - Ensure proper outlet routing
 - Improve pickup flow clarity
 - Prepare app for future delivery expansion
-

UX Goal

- Make store switching effortless
 - Reduce cognitive load
 - Keep outlet selection visually clean
-

User Psychology

Users want confidence that:

- Correct outlet is selected
 - Food availability is accurate
 - Ordering mode is clear
-

FINAL CONCLUSION — ZONE 2

- Store selection remains globally editable.
- Top-bar store selector becomes persistent across ordering flows.
- Starbucks-inspired ordering mode UX approved.
- Pickup-first architecture prioritized for initial rollout.
- Comes when the user is on the ordering menu screen and clicks the top bar for selecting the store.

Reference for Store Selection :

https://drive.google.com/file/d/1qMI8sxlByl5_PLJwflnrkHfDncwy26Ok/view?usp=sharing

ZONE 3 — HOME SCREEN ECOSYSTEM

Zone Objective

Create the primary conversion ecosystem of the app.

FINAL CONCLUSION — HOME EXPERIENCE

- Home screen becomes the primary post-login screen.
- Long-scroll storytelling interaction approved.
- Burger-opening transition into menu approved.
- Bottom Navigation Bar:
 - Home
 - Menu
 - My Farm

The homepage must feel:

- Alive
- Dynamic

- Craving-focused
 - Reward-oriented
-

FINAL CONCLUSION — MAIN HOME SCREEN

The homepage architecture will prioritize:

1. Cravings
2. Repeat ordering
3. Offers
4. Rewards
5. Quick menu access

Hero banners remain dynamic and campaign-driven.

Quick reorder remains high-priority for returning users.

The floating cart remains persistent once items are added.

ZONE 4 — MENU & BROWSING

Zone Objective

Transform hunger into confident item selection.

FINAL CONCLUSION — MENU ARCHITECTURE

Top section will contain:

1. Store Selector
2. Ordering Mode
3. Veg / Non-Veg Toggle
4. Offers & Reward Points

5. Horizontal Categories

Menu architecture will combine:

- Burger King menu hierarchy
 - McDonald's combo discovery
 - Starbucks top ordering UX
-

FINAL CONCLUSION — FULL MENU SCREEN

- Sticky category navigation approved.
 - Floating cart remains persistent.
 - India-first veg/non-veg visibility mandatory.
 - Featured sections prioritized:
 - Bestsellers
 - New arrivals
 - Spicy picks
-

FINAL CONCLUSION — ITEM DETAIL SCREEN

- Hero food image becomes dominant visual.
 - Live price updates required.
 - Add-ons and removals simplified.
 - Sticky bottom CTA mandatory.
 - People-also-order recommendations approved.
 - Nutritional info remains secondary.
-

FINAL CONCLUSION — COMBO BUILDER

- Combo building remains step-based.
 - Visual progress indicators required.
 - Bottom live-preview panel approved.
 - Combo pricing updates live.
-

FINAL CONCLUSION — ADD TO CART

- Bottom-sheet confirmation approved.
 - Auto-dismiss after ~3 seconds.
 - Quick access to cart required.
-

FINAL CONCLUSION — FILTER STATES

- Veg/non-veg filters remain highly visible.
 - Non-matching items may appear greyed out.
 - Easy filter removal mandatory.
-

FINAL CONCLUSION — UNAVAILABLE ITEMS

- Out-of-stock messaging should feel soft and emotional.
 - Alternative recommendations mandatory.
 - Notify-me functionality approved for future scalability.
-

FINAL CONCLUSION — ZONE 4

The Menu ecosystem is the most important revenue-driving section of the app.

Design priorities:

1. Food visuals
2. Fast add-to-cart
3. Clear filtering
4. Easy customization
5. Combo upselling
6. Repeat ordering support

The menu must feel:

- Fast
- Crave-worthy
- Organized
- Smart
- Emotional

ZONE 5: CART & PRE-CHECKOUT (5 Screens)

Screen 5.1 – Cart Screen

Screen 5.2 – Empty Cart Screen

Screen 5.3 – Minimum Order Not Met State

Screen 5.4 – Coupon / Offer Application Screen

Screen 5.5 – Upsell / Cross-sell Bottom Sheet

ZONE 6: CHECKOUT FLOW (6 Screens)

Screen 6.1 – Delivery Address Confirmation

Screen 6.2 – Pickup Confirmation Screen (if pickup selected)

Screen 6.3 – Payment Screen

Screen 6.4 – Payment Processing Screen

Screen 6.5 – Order Confirmed Screen

Screen 6.6 – Payment Failed Screen

ZONE 5 — CART, CUSTOMIZATION & PRE-CHECKOUT

Zone Objective

Convert user intent into a confident and high-value order before payment.

Business Goal

- Increase Average Order Value (AOV)
 - Reduce cart abandonment
 - Increase upsells
 - Improve customization engagement
 - Improve repeat ordering behaviour
-

UX Goal

- Make customization effortless
- Make upselling feel natural

- Prevent checkout confusion
 - Maintain speed while offering flexibility
-

User Psychology

At cart stage, users are highly sensitive to:

- Hidden complexity
- Price changes
- Confusing customization
- Losing selections
- Slow interactions

The cart experience should feel:

- Controlled
 - Flexible
 - Rewarding
 - Organized
 - Fast
-

Inspiration References

App	Inspiration Taken
Starbucks	Takeaway & dine-in ordering flow
McDonald's	Combo and customization UX
Burger King	Item modification hierarchy
Zomato	Coupon visibility
Swiggy	Cart upselling patterns

SCREEN FLOW — ZONE 5

Menu Item
↓
Customization Screen
↓
Cart Screen
↓
Upsell Sections
↓
Coupon & Rewards
↓
Proceed to Checkout

SCREEN 5.1 — CART & CUSTOMIZATION SCREEN

Brainstorming

Core Structure Discussions

The screen should follow the previously finalized “Task Screen” structure for consistency.

Burger Customization Discussions

Customization options discussed:

- Wheat Bun
- White Bun
- Extra Patty
- Cheese Slice
- Cheese Burst

Sides & Add-ons Discussions

Horizontal slanting cards for:

- Peri-Peri Fries (Regular)
- Peri-Peri Fries (Medium)
- Cheesy Fries

Upselling Discussions

Dedicated sections before checkout:

- Munchies
- Beverages

Goal:

Increase basket size naturally without aggressive selling.

FINAL CONCLUSION — CART & CUSTOMIZATION SCREEN

The customization screen will include:

Core Item Customization

- Bun selection:
 - Wheat Bun
 - White Bun

Add-ons

- Extra Patty
- Cheese Slice
- Cheese Burst

Horizontal Side Scroller

Slanting card-based horizontal UI for:

- Peri-Peri Fries
- Cheesy Fries
- Side upgrades

Upsell Sections

Before final Add to Cart CTA:

- Munchies Section
- Beverage Section

UX Priorities

- Fast editing
 - One-hand usability
 - Live price updates
 - Minimal clutter
 - Visual hunger appeal
-

SCREEN 5.2 — HORIZONTAL SCROLL SYSTEM

Brainstorming

UX Concerns Discussed

- Horizontal scroll conflicting with vertical cart scroll
 - User accidentally scrolling wrong sections
 - Card hierarchy consistency
-

FINAL CONCLUSION — HORIZONTAL SCROLL SYSTEM

- Slanting cards will be standardized globally.
 - Horizontal scroll areas must snap smoothly.
 - Scroll gestures must not interfere with vertical scrolling.
 - Cards should remain visually premium and highly image-focused.
 - Maximum visible cards at once:
 - 2.2 cards on screen for curiosity-based scrolling.
-

SCREEN 5.3 — COUPONS & REWARDS

Brainstorming

Key Discussions

- Auto-applying rewards
 - Coupon frustration reduction
 - Real-time eligibility validation
-

FINAL CONCLUSION — COUPONS & REWARDS

The reward system must behave dynamically.

Logic Requirements

- Invalid coupons should automatically hide.
- Only applicable offers should be highlighted.
- Real-time validation is mandatory.

Visual States

Successful coupon application should show:

- Price strike-through
- “Saved ₹X” indicator
- Green success state
- Small celebration micro-animation

UX Priority

Users should never discover coupon invalidation only at payment stage.

SCREEN 5.4 — CART STATE MANAGEMENT

Brainstorming

Technical Discussions

- Editing item from checkout
 - Preserving previous selections
 - Avoiding user frustration
-

FINAL CONCLUSION — CART STATE MANAGEMENT

When a user edits an item:

- App redirects back to Zone 5 customization screen.
- Previous selections must remain pre-filled.
- Deep linking architecture required between:
 - Cart
 - Customization
 - Checkout

The user should NEVER lose:

- Add-ons
 - Quantity
 - Instructions
 - Customizations
-

SCREEN 5.5 — PRE-CHECKOUT UPSELLS

Brainstorming

Upsell Categories Discussed

- Fries
- Drinks

- Desserts
- Munchies

UX Discussion

Upsells should feel:

- Helpful
 - Craving-based
 - Intelligent
 - Non-intrusive
-

FINAL CONCLUSION — PRE-CHECKOUT UPSELLS

Upsell modules will appear before checkout confirmation.

Priority Order

1. Beverages
2. Fries
3. Munchies
4. Desserts

UX Rules

- One-tap add functionality mandatory.
 - No popup interruptions.
 - Smooth inline recommendations preferred.
 - Personalized recommendations supported in future versions.
-

FINAL CONCLUSION — ZONE 5

Zone 5 becomes:

- The basket optimization engine
- The customization engine

- The upselling engine

Primary design priorities:

1. Fast customization
2. Clear pricing
3. Smooth editing
4. Reward visibility
5. High AOV optimization

The experience must feel:

- Fast
 - Controlled
 - Premium
 - Crave-worthy
 - Smart
-

ZONE 6 — ORDERING, CHECKOUT & PAYMENT

Zone Objective

Create a frictionless and trustworthy ordering completion experience.

Business Goal

- Maximize payment success rates
 - Reduce checkout drop-offs
 - Improve reorder retention
 - Improve pickup experience
 - Build payment trust
-

UX Goal

- Minimize payment anxiety
 - Simplify order review
 - Create confidence during ordering
 - Keep checkout extremely fast
-

User Psychology

At checkout stage users need:

- Clarity
- Trust
- Speed
- Transparency
- Confidence

The checkout should feel:

- Secure
 - Organized
 - Predictable
 - Smooth
-

Inspiration References

App	Inspiration Taken
Starbucks	Pickup & dine-in architecture
Swiggy	Address persistence
Zomato	Payment flow
Apple Pay	Minimal payment friction

SCREEN FLOW — ZONE 6

Order Mode Selection

Address / Store Selection

Order Summary

Coupons & Rewards

Payment

Order Confirmation

Live Order Status

SCREEN 6.1 — ORDER MODE SELECTOR

Brainstorming

Modes Discussed

- Takeaway
- Dine-in
- Delivery

UX Discussions

- Persistent visibility
- Starbucks-inspired experience
- Minimal switching friction

FINAL CONCLUSION — ORDER MODE SELECTOR

Three order modes supported:

1. Takeaway
2. Dine-in
3. Delivery

UX Behaviour

- Selector remains visible at top.
 - Users can switch modes without restarting checkout.
 - Starbucks-inspired ordering architecture approved.
-

SCREEN 6.2 — ADDRESS MANAGEMENT

Brainstorming

Discussions

- Address persistence
 - Multi-device consistency
 - Local caching
 - Fast checkout
-

FINAL CONCLUSION — ADDRESS MANAGEMENT

Address Logic

- Saved addresses remain persistent across app.
- Address cached locally for speed.
- Synced with backend profile for multi-device consistency.

UX Priority

Returning users should never repeatedly enter addresses.

SCREEN 6.3 — ORDER SUMMARY

Brainstorming

Discussions

- Full item visibility
- Re-customization
- Offer visibility
- Edit flexibility

FINAL CONCLUSION — ORDER SUMMARY

The order summary must include:

- Full item list
- Add-ons
- Quantities
- Taxes
- Discounts
- Rewards applied

Re-Customization

If user edits an item:

- Redirect back to Zone 5 customization screen.
 - Preserve all previous selections.
-

SCREEN 6.4 — COUPONS & REWARDS ENGINE

FINAL CONCLUSION — COUPONS & REWARDS ENGINE

The rewards engine must:

- Dynamically validate coupons
- Filter invalid offers
- Prioritize highest-value eligible offers

UX Goals

- Zero confusion
 - Zero payment-stage frustration
 - Maximum savings visibility
-

SCREEN 6.5 — PAYMENT SYSTEM

Brainstorming

Payment Discussions

Supported methods discussed:

- UPI
- Cards
- Wallets

Trust Discussions

Need:

- Secure payment perception
- Minimal friction

- Fast completion
-

FINAL CONCLUSION — PAYMENT SYSTEM

Supported payment methods:

1. UPI
2. Debit/Credit Cards
3. Wallets

UX Priorities

- UPI prioritized for India-first behaviour.
- Saved payment methods supported.
- Secure trust indicators mandatory.

Technical Requirements

Payment gateway integration must support:

- Fast retries
 - Failure recovery
 - Cart persistence
 - Transaction validation
-

SCREEN 6.6 — ORDER STATUS & POST-PURCHASE

Brainstorming

Discussions

- Live order status
- Previous orders

- One-tap reorder
 - POS integration
 - Pickup notifications
-

FINAL CONCLUSION — ORDER STATUS & POST-PURCHASE

After successful payment:

- Order screen transitions into live status screen.
- Previous Orders section appears below active order.

Retention Features

- One-Tap Reorder mandatory.
- Previous orders become quick conversion tools.

POS Integration

For takeaway/dine-in:

- Real-time POS integration required.
 - “Order Ready” notifications mandatory.
-

FINAL CONCLUSION — ZONE 6

Zone 6 becomes:

- The trust engine
- The payment engine
- The retention engine

Primary design priorities:

1. Fast checkout
2. Payment confidence
3. Order visibility

4. Seamless editing
5. Reordering simplicity

The checkout experience must feel:

- Secure
 - Fast
 - Intelligent
 - Frictionless
 - Reliable
-

TECHNICAL ACTION ITEMS

UI/UX

- Create high-fidelity wireframes for:
 - Slanting card system
 - Order mode selector
 - Dynamic reward states

Engineering

- Deep linking between cart and customization
- Local + backend synced address management
- POS integration architecture
- Coupon validation engine

Payments

Finalize:

- UPI providers
 - Card processors
 - Wallet integrations
 - Payment retry logic
-

FINAL MASTER RULE

ONLY ORANGE CONCLUSION BLOCKS ARE FINAL.

Everything else is:

- Brainstorming
- Exploration
- Product discussions
- UX ideation
- Technical considerations

Orange blocks are the official implementation truth.
